

President Tram

The President Tram

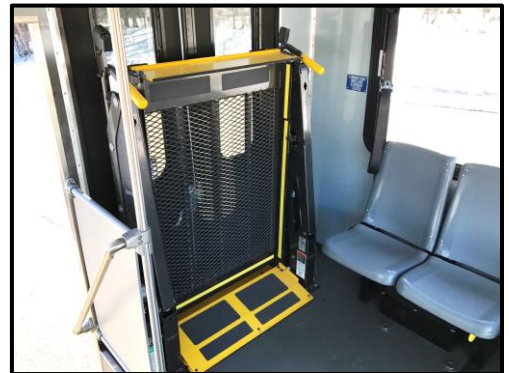

The President Tram offers the unique combination of being both street legal and open air. With its easy on/off loading capabilities and higher ride, this unit is perfect for sight seeing all over town. When equipped with weather enclosures, this traditionally open air tram quickly converts to an enclosed vehicle, ready to operate any day of the year. Each President Tram is built on the heavy duty MB-65 Freightliner chassis and powered by a Cummins engine or on the Ford F-53 Motorhome chassis with a 7.3L V8 gasoline engine. The tram is custom built to the customer's specifications and can include one door, two doors or several rows; dash air conditioning and heating; and several seating configurations offering fiberglass bench seats or Freedman individual seats. The President Tram can comfortably seat between 20 and 40 passengers depending on the seating configurations.
